

WHAT MAKES A PART RIGHT?

We can already plan in the *continuous* configuration space

— but the *right* path is the one its own **geometry** favors.

WHAT MAKES A PATH RIGHT?

03

We can already plan in the *continuous* configuration space
— but the *right* path is the one its own **geometry** favors.

flat space

a sphere

a curved space

02

The Geometry of Distance

How far apart are two configurations?
